

From the first design concept, through the final engineer's renderings, Axxis Biometrics has sought to develop a biometric deadbolt lock that captured a modern aesthetic but retained the familiar and reassuring look of a traditional deadbolt lock.

A biometric deadbolt lock that represents the union of modern day convenience & security with the craftsman's style & quality of how things were made in "the Good Old Days."

PRESENTING...

The BioAxxis® BD1

Biometric Fingerprint Deadbolt Lock

New from

Axxis Biometrics

So Simple!
Just power it up with 4 AA Batteries
that will last for one year
with normal usage

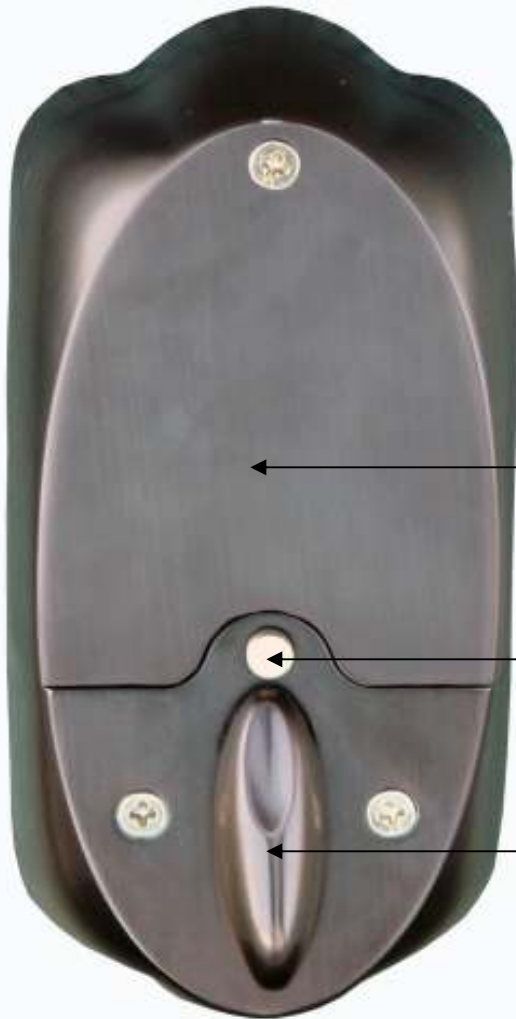

The innovative Sliding Dust Cover
hides and protects the fingerprint sensor.
Place your finger in the reader, and...
VOILA!
...the deadbolt retracts and your door is open.

Nothing was forgotten with the **BioAxxis® BD1...**

1. Gorgeous appearance
2. Simple and elegant
3. Access by your unique fingerprint (under the Sliding Dust Cover)
4. Or access with a traditional key (a little added back-up comfort)
5. No confusing keypads
6. No confusing buttons
7. And – oh by the way – 100% weatherproof. Rain, snow, dust humidity, and even UV rays are completely repelled.
8. And Safety? All electronics are housed inside the door – not on the outside where potential damage could occur.

And we left nothing to chance on the Inside unit...

1. The battery cover is securely sealed, protecting the batteries as well as the programming buttons.
2. One simple button allows you to automatically reengage your deadbolt.
3. Or you can use the time honored tradition of turning the bolt yourself – no problem.
